

# CarePort<sup>®</sup> Connect

Track and manage patients across the continuum  
to improve patient outcomes and cost of care

**CarePort Connect** enables disparate providers that share patients across the continuum – hospitals, ACOs, physician groups, payers, and post-acute providers – to coordinate care through real-time, actionable data.

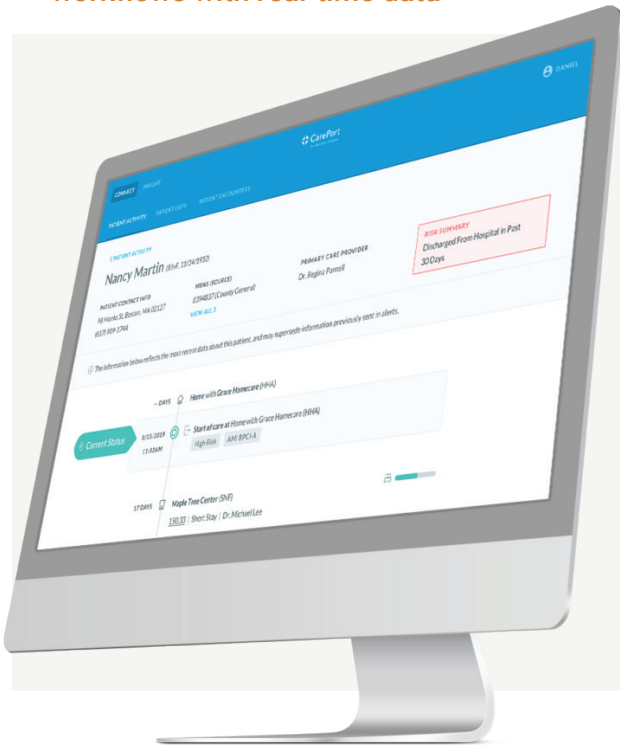

**Drive care coordination  
workflows with real-time data**

**Improve patient outcomes  
and spend**

**Strengthen relationships  
with provider partners**

- Assist with patient and post-acute follow-up regarding patient care with **live updates on admissions and discharges** throughout the continuum
- Monitor or redirect patients to the appropriate level of care and **prevent readmissions** with **instant notifications of critical patient events** such as hospital readmissions or ED presentations
- Share data and information about patient outcomes to **strengthen relationships and connectivity with provider partners**
- Generate a **daily worklist** or follow specific patients or cohorts defined by workflow

"CarePort's level of transparency and real-time information regarding our patients was a game changer."

**Alex Alvarez**

Vice President for Care Management and Post-Acute Transitions  
Maimonides Medical Center

**21% increase**  
in number of transitional care  
management (TCM) calls  
completed year-over-year

**11% reduction**  
in readmission rate

**4% decrease**  
in acute length of stay for  
patients discharging to SNF
