

WellSky Exchange for WellSky Specialty Care

Addressing the unique challenges of post-acute care delivery through cross-organization collaboration.

Rapid change is propelling healthcare into an exciting future of both unprecedented challenges and bold opportunities. Interoperability – the act of sending, receiving, locating, and using clinical data – is no longer optional, it is required. As value-based care continues to evolve, care providers must ensure data sharing is seamless as patients transition within the care continuum.

Successful outcomes are dependent on collaboration with extended care teams. Organizations must become comprehensive receivers and senders of data to support positive clinical outcomes. Interoperability supports this effort of coordinated care. It ensures organizational boundaries do not restrict the exchange of critical patient information.

WellSky Exchange for Specialty Care supports our clients' abilities to intelligently coordinate, manage, and deliver care.

Seamlessly expand your access to critical, external patient health information

Improve organizational efficiency by centralizing digital communication including referrals, intake, and care plan order authorizations.

Reduce bottlenecks and cost by eliminating manual workflow, information exchange delays, and material expense of paper-based faxing.

Grow patient census through closed-loop connections with external organizations and community referral partners.

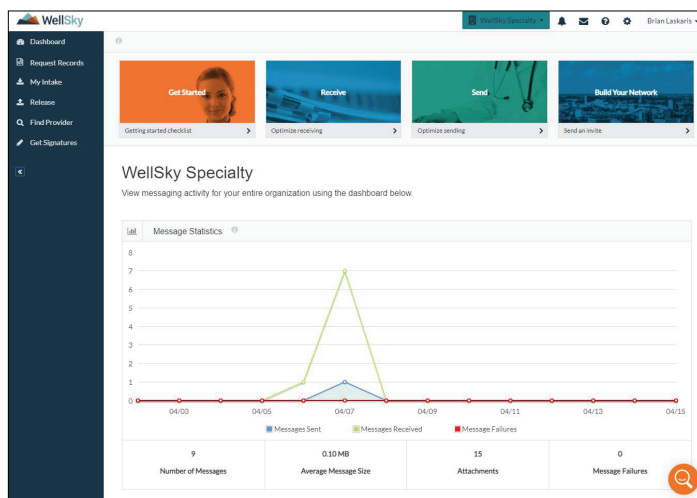

Support more informed care decisions and accelerate time to with access to comprehensive patient records and streamlined processes for consent and intake.

Key capabilities

Direct secure messaging and e-faxing across interoperable networks

Securely and seamlessly communicate with external provider organizations to *support continuity of care*.

Harness the power of digital, interoperable communication through Direct Secure Messaging and electronic faxing. Connection to the DirectTrust communication framework enables organizations using WellSky Specialty Care to quickly and securely communicate and exchange health information with millions of healthcare providers nationwide, enabling the timely sharing of patient health information and a coordinated referral process.

Streamlined management of inbound patient information

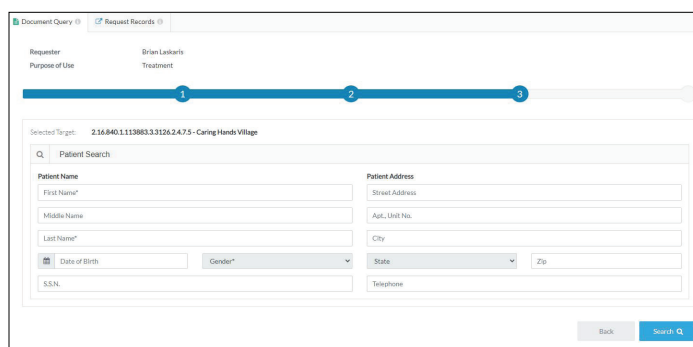

Easily transform unstructured clinical data to *support easier review of health history for new patient admissions*.

Make sense of unformatted and uncontextualized documents received from external sources, including referral partners. Robust tools enable WellSky Specialty Care clients to import structured and unstructured data documents. Users can efficiently tag, partition, and import data to ensure the right information is associated with the right patient record.

Connection to CommonWell, Carequality, and regional Health Information Exchanges (HIEs)

Locate, retrieve, and share clinical records between your organization and external providers to *support informed care decisions*.

Access interoperable exchange networks to gain visibility into a patient's health history and inform your care decisions. Connection to networks like CommonWell and Carequality enable organizations using WellSky Specialty Care to search for and retrieve clinical information from health systems nationwide, as well as contribute clinical records through HIEs for external provider access.

The screenshot shows the 'Document Query' interface. It includes a 'Requester' section with 'Brian Laskaris' and 'Purpose of Use' set to 'Treatment'. A progress bar shows three steps. The 'Selected Target' is '2.16.840.1.113883.3.1262.4.75 - Caring Hands Village'. Below is a 'Patient Search' form with fields for Patient Name (First, Middle, Last), Patient Address (Street, Apt./Unit No., City, State, Zip), Date of Birth, Gender, SSN, and Telephone. A 'Search' button is at the bottom right.

Advanced workflow integrations with third-party solutions

Take interoperability to the next level by connecting to third-party software to *support further workflow efficiencies*.

Quickly connect common third-party applications and office tools to WellSky Specialty Care. Applications such as DocuSign®, Xerox™, Konica Minolta™ and others integrate into your workflows through WellSky Exchange, driving efficient and secure operations throughout your entire office.

Every day, WellSky is innovating and exploring new ways to enhance data usability and support the best outcomes for patients. The WellSky Exchange is powering an exciting transformation across healthcare, combining innovative solutions with the great care being delivered by health care providers every day.
