

Extend your CarePort Referral Management investment

CarePort allows post-acute providers to holistically manage transitions:

- ⇒ **CarePort Community**
Post-acute care customers can send referrals to the next appropriate level of care
- ⇒ **CarePort Connect**
Manage and track patients across the continuum with real-time alerts and data sharing
- ⇒ **CarePort Insight**
Gain insight into patient outcomes and key performance metrics important to your referral partners
- ⇒ **CarePort Guide**
Market your services to patients and families
- ⇒ **CarePort Inquiry Management**
Admit patients right from the referral work list, eliminating manual entry and helping to retain key data
- ⇒ **Post-acute authorization**
Send and manage post-acute authorization requests to payers in one worklist for streamlined workflows

CarePort mobile referral management

Our mobile solution is ideal for intake personnel or liaisons in the field as it allows them the flexibility to receive, review, and respond to referrals using a mobile device.

Core system integration

CarePort automatically transfers hospital referral information into back-office clinical and financial systems. This allows the reuse of patient demographic, financial and clinical data and eliminates the rekeying of referral information.

Outcomes we deliver

Enhance your market presence

Using CarePort Guide, any post-acute provider can effectively market their organization to patients and their families, highlighting Medicare star ratings, specialties and amenities offered, thereby ensuring the patient has the best possible information to make an informed choice.

Streamline the intake process

With CarePort Referral Management, post-acute providers can share bed availability and automatically receive and respond to referrals from a nationwide network of hospitals, enter referrals from non-electronic sources and collect important information to better market your organization.

Gain operational and clinical improvements by automatically transferring hospital referral information into clinical and financial systems, facilitating accurate demographic, insurance and clinical information for smoother admissions.

“This electronic referral system is a major advantage in many of our facilities by offering automated referral notifications from referral sources, the ability to view all necessary patient information, and the ability to respond quickly to discharge planners.”

Lea Kenney, Director of Marketing
Signature Health, LLC
