

# Introducing WellSky® Delivery Manager

CareTend® powered by WellSky®

## Enhancing delivery & shipping capabilities

Specialty pharmacy and home infusion providers are unique in the day to day struggles they come across. Having efficient processes in place, integrations with the management tools your team uses, one log-in entry point, and your pharmacy's visibility are essential items you need to run a successful business.

Introducing WellSky Delivery Manager: available through an integration with CareTend. WellSky Delivery Manager is a workflow management and logistics solution that helps keep costs down by:

- Improving staff efficiency
- Removing waste
- Increasing patient satisfaction
- Providing unparalleled visibility to your pharmacy operations

Integration with pharmacy management systems to limit double entry and transcription errors.

Electronic delivery system to maximize efficiency and safety including one touch dialing, route optimization, electronic delivery proof, and reporting.

Real-time patient notification on order status through text messaging or push notifications from mobile application.

## Solving for multiple management systems, manual processes, and so much more

The goal of pharmacy and infusion providers is to provide the best possible care to their patients. Achieving this goal means that your business needs to run efficiently and be profitable.

As it stands today, the pharmacy market is highly fragmented. There are multiple Pharmacy Management Systems available that support day-to-day pharmacy operations, but most are incomplete and insufficient regarding delivery management. As a result, many of the pharmacies' needs go unmet, or they create workarounds in an attempt to "get the job done."

WellSky Delivery Manager meets these needs, focusing on the home infusion and the specialty pharmacy markets.

	Time savings per driver	Total daily time savings
Route setup	20 minutes	100 minutes
En route time management	5 minutes	250 minutes
Ticket confirmation per delivery	3 minutes	150 minutes

### Saving time and money by using one solution for your deliveries

- Delivery and shipping management using a web-based solution and a complementing mobile application
- Route optimization and visualization using Google Maps
- See where the delivery is with real-time delivery truck tracking
- Electronic signature capture and delivery logging
- Proof of delivery with longitude, latitude, and photo
- Offline capabilities using mobile
- Fully integrated shipping with FedEx, USPS, UPS, and couriers (ShipStation® account required)
